C; Comment: The amino-terminal propeptide domain appears not to be completely cleaved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         A,Cross-references: GDB:119064; OMIM:120190

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Arch. Blochem. Blophys. 384:37-46(2000).

-!- FUNCTION: Type I collagen is a member of group I collagen

-(fibrillar forming collagen).

-(SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.

-!- PTM: Prolines at the third position of the tripeptide repeating

unit (G-X-Y) are hydroxylated in some or all of the chains.

-!- DISEASE: Defects in COLIA1 are a cause of osteogenesis imperfecta

(OI).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disease mutation; Extracellular matrix; Pyrrolidone carboxylic acid; Repeat;

-!- FUNCTION: Type I collagen is a member of group I collagen (fibrillar forming collagen).

-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- SUBUNIT: Trimers of one alpha 2(I) and two alpha 1(I) chains.
-!- TISSUE SPECIFICITY: Forms the fibrils of tendon, ligaments and bones. In bones the fibrils are mineralized with calcium
